

PATROL

Vehicle mounted 360° panoramic Surveillance

FEATURES

- 360°, panoramic imagery
- USB 3.0
- High-quality mega-pixel
- ONVIF PTZ compatible
- Streaming H264 (including VR format)
- GPS NMEA data
- Image archiving
- Analytics 'Ready'
- Rugged, IP67 form factor
- Simple integration with 'open' camera management system
- No image distortion or 'stitching'

ADVANTAGES

- Captures everything, in all directions, all of the time
- Built to withstand tough environmental and usage conditions
- Assists situation reconstruction

BENEFITS

- Greater impartiality
- Improves understanding
- Generates public reassurance
- Supports accountability
- Improves performance
- Aids dispute resolution

The Patrol Camera

The Observant PATROL Camera System is a vehicle mounted 360° panoramic video camera.

PATROL enables high-resolution visual documentation of everything occurring in the vicinity of a patrol or tasking, ensuring that nothing is missed.

The Challenge

All too frequently, even in an environment cluttered with CCTV and consumer video camera devices, vital evidence is missed.

Often cameras are pointing in the wrong direction and what video is available fails to reflect the true, or the complete nature of the situation.

The contextual environment is always vital in ensuring a thorough understanding of the event and an accurate post incident analysis.

The Solution

PATROL provides a persistent over-watch to ensure this critical data is captured.

With a single camera and using innovative technology, PATROL visually documents the entire scene giving investigators the ability to recreate the operational environment and context post incident.

REVIEW

Reviewing the recorded images is simple with the free to use, highly intuitive, REVIEW software application. With versatile screen layouts, powerful timeline search and player controls, this tool simplifies investigation and incident analysis.

REVIEW provides instant local or networked timeline access for real-time playback of PATROL live and previously acquired archives. Clips within an archive can easily be identified and exported.
